

Nama : Renaldy Rizki Maulana

Nim : 151524026

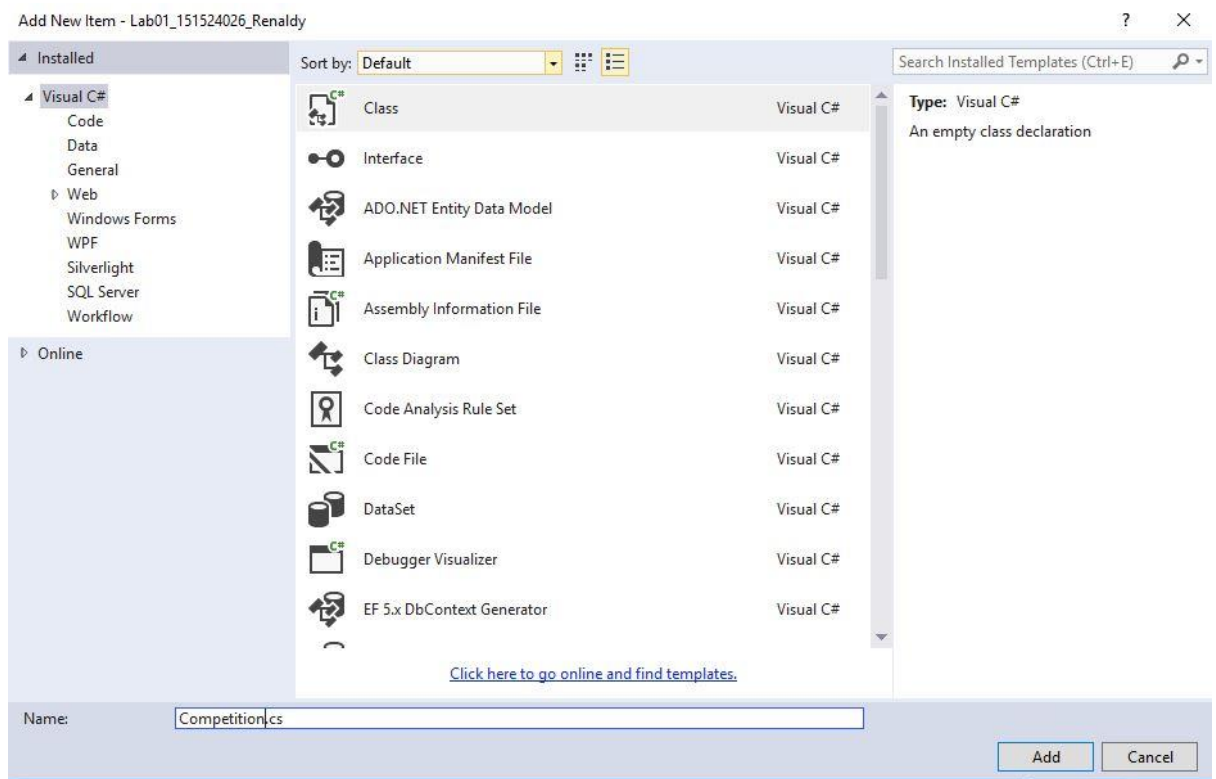

Tugas : PLOO - Lab03

## MANY TO MANY RELATIONSHIP - ENTITY FRAMEWORK ASP.NET MVC

---

Langkah – Langkah Pembuatan :

1. Gunakan project yang sebelumnya dibuat.
2. Buat class **Competition.cs** dengan cara klik kanan pada folder **Model** pilih menu **Add > Class... > Class** lalu beri nama **Competition.cs** seperti gambar dibawah :

Berikut source code dari class ini :

```
using System;
using System.Collections.Generic;
using System.ComponentModel.DataAnnotations;
using System.ComponentModel.DataAnnotations.Schema;
using System.Linq;
using System.Web;

namespace Lab01_151524026_Renaldy.Models
{
    [Table("Competition")] //nama table

    public class Competition
    {

```

```

    public Competition()
    {
        this.Members = new HashSet<Member>();
    }

    [Key]
    [DatabaseGenerated(DatabaseGeneratedOption.Identity)]
    public int CompetitionId { get; set; }

    [Required]
    [Display(Name = "Competition Name")]
    [StringLength(255)]
    public string CompetitionName { get; set; }

    [StringLength(255)]
    public string Location { get; set; }

    [Required]
    [Display(Name = "Start Date")]
    [DataType(DataType.Date)]
    [DisplayFormat(DataFormatString = "{0:yyyy-MM-dd}",
ApplyFormatInEditMode = true)]
    public DateTime StartDate { get; set; }

    [Required]
    [Display(Name = "End Date")]
    [DataType(DataType.Date)]
    [DisplayFormat(DataFormatString = "{0:yyyy-MM-dd}",
ApplyFormatInEditMode = true)]
    public DateTime EndDate { get; set; }

    [StringLength(225)]
    public string Description { get; set; }

    public virtual ICollection<Member> Members { get; set; }
}
}

```

3. Tambahkan baris kode dibawah kedalam file **Models/LabModels.cs**

```

public virtual DbSet<Competition> Competition { get; set; }

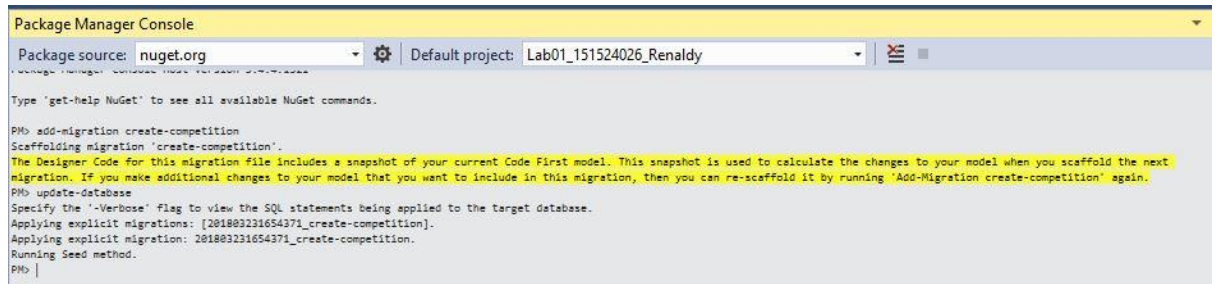

```

Lakukan rebuild setelah menyimpan kode diatas

Lalu buat migration untuk menambahkan tabel competetition terlebih dahulu dengan cara :

- **add-migration AddCompetitionTable**
- **update-database**

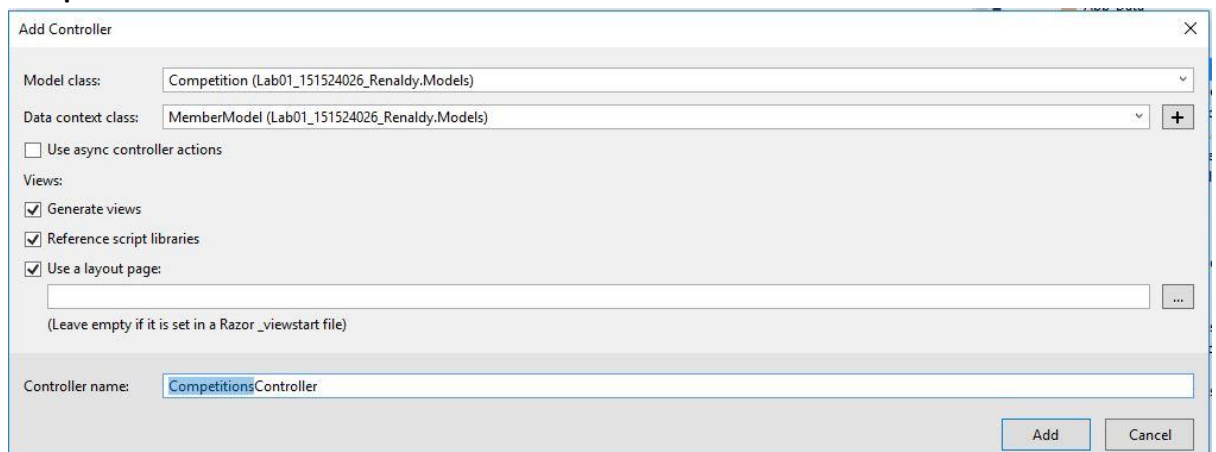

```
Package Manager Console
Package source: nuget.org
Default project: Lab01_151524026_Renaldy

Type 'get-help NuGet' to see all available NuGet commands.

PM> add-migration create-competition
Scaffolding migration 'create-competition'.
The Designer Code for this migration file includes a snapshot of your current Code First model. This snapshot is used to calculate the changes to your model when you scaffold the next migration. If you make additional changes to your model that you want to include in this migration, then you can re-scaffold it by running 'Add-Migration create-competition' again.
PM> update-database
Specify the '-Verbose' flag to view the SQL statements being applied to the target database.
Applying explicit migrations: [201803231654371_create-competition].
Applying explicit migration: 201803231654371_create-competition.
Running Seed method.
PM>
```

4. Setelah itu buat master competition dengan membuat class controller **CompetitionController** dengan cara klik kanan pada folder Controllers pilih menu **Add > Controller... > MVC 5 Controller with views, using Entity Framework** lalu akan tampil seperti gambar di bawah dan sesuaikan, lalu beri nama controller dengan nama **CompetitionController**

Add Controller

Model class: Competition (Lab01\_151524026\_Renaldy.Models)

Data context class: MemberModel (Lab01\_151524026\_Renaldy.Models)

☐ Use async controller actions

Views:

☒ Generate views

☒ Reference script libraries

☒ Use a layout page:

Controller name: CompetitionController

Add Cancel

5. Setelah itu uji fungsionalitas CRUD Master Competition dan sekarang membuat relationship many to many.

Buka file **Member.cs** pada folder **Models**, lalu tambah source code berikut:

```
// Constructor
public Member()
{
    this.Competitions = new HashSet<Competition>();
}
..
..
..
// Many to many relationship
public virtual ICollection<Competition> Competitions { get; set; }
```

Buka file **Competition.cs** pada folder **Models**, lalu tambah source code berikut:

```
// Constructor
public Competition()
{
    this.Members = new HashSet<Member>();
}
```

```

}
..
..
..
// Many to many relationship
public virtual ICollection<Member> Members { get; set; }

```

- Setelah itu, buka **Package Manager Console** pada menu **Tools > NuGet Package Manager > Package Manager Console**

Ketik Add-Migration AddManyToManyMemberCompetition dan akan menghasilkan file baru pada folder Migrations.

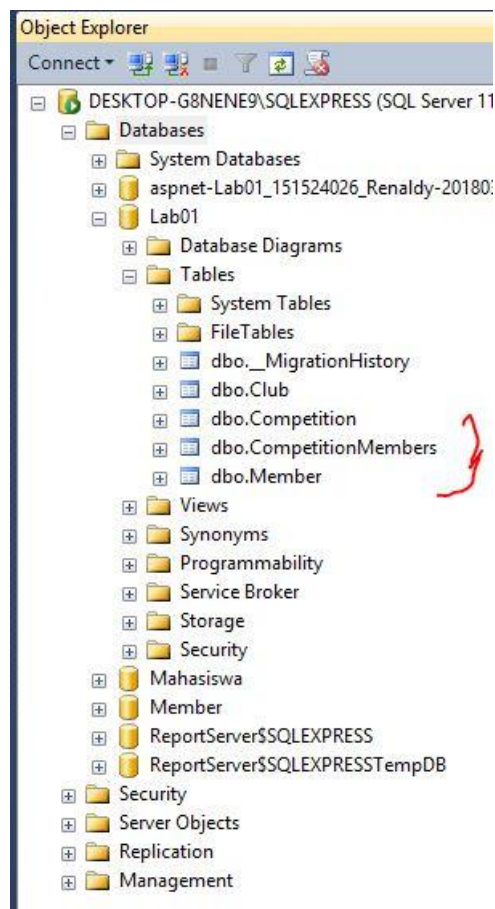

Setelah itu ketik kembali perintah Update-Database untuk mengubah struktur pada database.

```

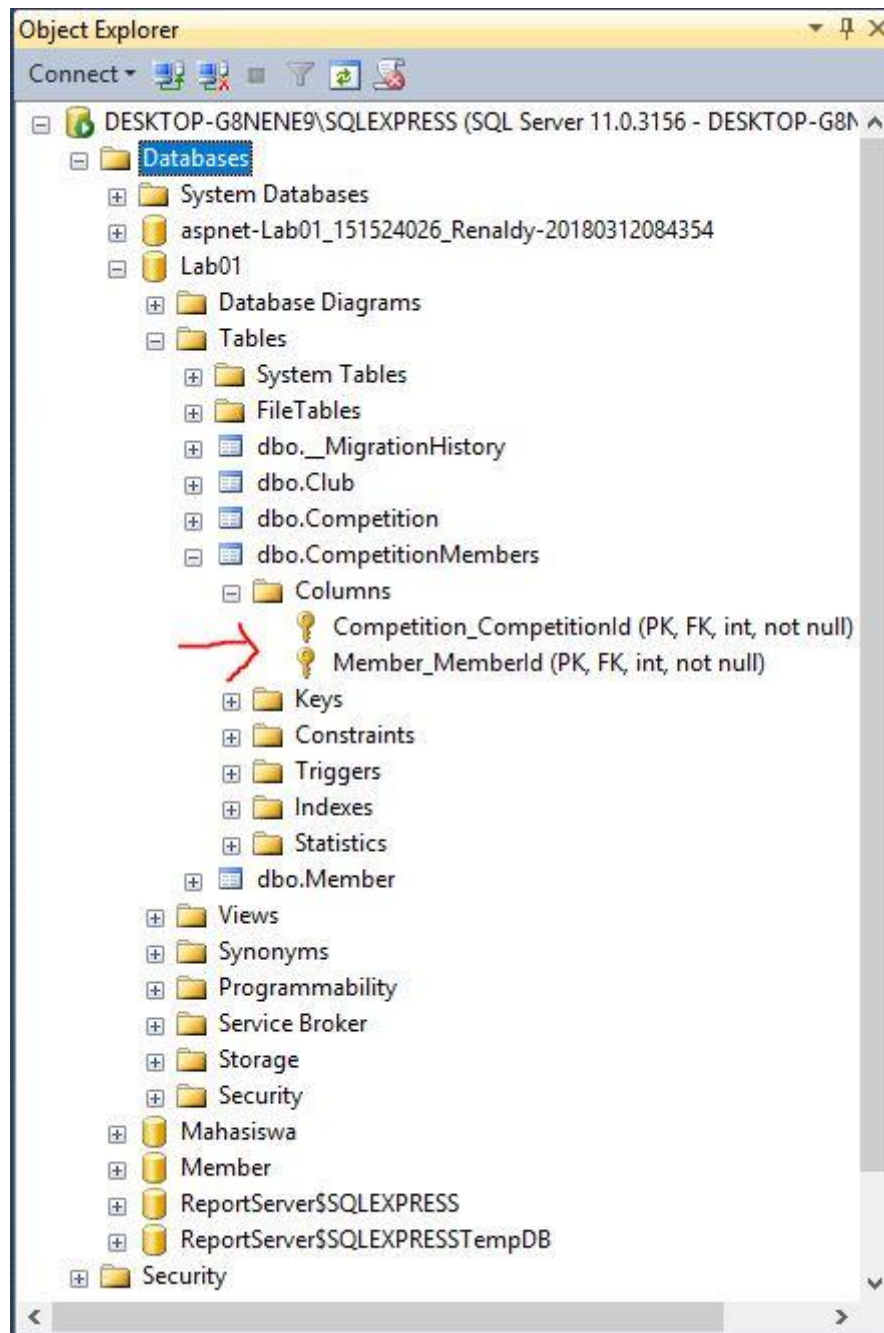

PM> add-migration many-to-many
Scaffolding migration 'many-to-many'.
The Designer Code for this migration file includes a snapshot of your current Code First model. This snapshot is used to calculate the changes to your model when you scaffold the next migration. If you make additional changes to your model that you want to include in this migration, then you can re-scaffold it by running 'Add-Migration many-to-many' again.
PM> update-database
Specify the '-Verbose' flag to view the SQL statements being applied to the target database.
Applying explicit migrations: [201803261554370_many-to-many].
Applying explicit migration: 201803261554370_many-to-many.
Running Seed method.
PM>

```

- Maka dalam database akan terbuat table baru (table turunan dari Members dan Competition) dikarenakan hubungan many-to-many seperti yang ditunjukkan pada gambar dibawah ini:

Dalam table baru yang terbuat karena adanya hubungan many-to-many tersebut (CompetitionMembers) terdapat dua field yang berisi primary key dari kedua table induknya seperti yang digambarkan berikut ini:

8. Buat sebuah class dalam folder model dengan nama **MemberCompetition.cs** dengan source code sebagai berikut :

```
using System;
using System.Collections.Generic;
using System.ComponentModel.DataAnnotations;
using System.Linq;
using System.Web;
using System.Web.Mvc;
```

```

namespace Lab01_151524026_Renaldy.Models
{
    public class MemberCompetition
    {
        public Competition Competition { get; set; }

        [Display(Name = "Members")]
        public IEnumerable<SelectListItem> AllMembers { get; set; }

        private List<int> _selectedMembers;
        public List<int> SelectedMembers
        {
            get
            {
                if (_selectedMembers == null)
                {
                    _selectedMembers = Competition.Members.Select(m =>
m.MemberId).ToList();
                }
                return _selectedMembers;
            }
            set { _selectedMembers = value; }
        }
    }
}

```

9. Setelah itu buka file **Controllers/CompetitionController.cs** dan ubah pada method **[GET] Edit()** menjadi seperti source di bawah :

```

// GET: Competitions/Edit/5
public ActionResult Edit(int? id)
{
    if (id == null)
    {
        return new HttpStatusCodeResult(HttpStatusCode.BadRequest);
    }
    var memberCompetition = new MemberCompetition
    {
        Competition = db.Competition.Include(i => i.Members).First(i
=> i.CompetitionId == id)
    };

    if (memberCompetition.Competition == null)
    {
        return HttpNotFound();
    }
    var allmemberlist = db.Member.ToList();
    memberCompetition.AllMembers = allmemberlist.Select(m => new
SelectListItem
    {
        Text = m.FirstName,
        Value = m.MemberId.ToString()
    });

    return View(memberCompetition);
}

// POST: Competitions/Edit/5
// To protect from overposting attacks, please enable the specific
properties you want to bind to, for
// more details see http://go.microsoft.com/fwlink/?LinkId=317598.

```

```

[HttpPost]
[ValidateAntiForgeryToken]
public ActionResult Edit(MemberCompetition memberCompetition)
{
    if (memberCompetition == null) return new
    HttpStatusCodeResult(HttpStatusCode.BadRequest);

    if (ModelState.IsValid)
    {
        var competitionToUpdate = db.Competition
            .Include(c => c.Members).First(c => c.CompetitionId ==
memberCompetition.Competition.CompetitionId);

        if (TryUpdateModel(competitionToUpdate, "Competition", new
string[] { "Name", "Location", "StartDate", "EndDate", "Description",
"CompetitionId" }))
        {
            var newMembers = db.Member.Where(
                m =>
memberCompetition.SelectedMembers.Contains(m.MemberId)).ToList();
            var updatedMembers = new
HashSet<int>(memberCompetition.SelectedMembers);

            foreach (Member member in db.Member)
            {
                if (!updatedMembers.Contains(member.MemberId))
                {
                    competitionToUpdate.Members.Remove(member);
                }
                else
                {
                    competitionToUpdate.Members.Add((member));
                }
            }
            db.Entry(competitionToUpdate).State =
System.Data.Entity.EntityState.Modified;
            db.SaveChanges();
        }

        return RedirectToAction("Index");
    }
    return View(memberCompetition);
}

```

10. Lalu buka **Views/Competition/Edit.cshtml** dan lakukan perubahan seperti berikut :

Line	Before	After
1	<b>@model</b> Lab01_151524026_Renaldy.Models .Competition	<b>@model</b> Lab01_151524026_Renaldy.Models.MemberC ompetition

Tambahkan source code dibawah di atas component button save

```

<div class="form-group">
    @Html.LabelFor(model => model.AllMembers, htmlAttributes: new{
@class = "control-label col-md-2"})
    <div class="col-md-10">
        @Html.ListBoxFor(m => m.SelectedMembers, Model.AllMembers,
new { @class = "form-control" })
        @Html.ValidationMessageFor(model => model.AllMembers, "", new
{ @class = "text-danger" })
    </div>
</div>

```

```

<div class="form-group">
    @Html.LabelFor(model => model.Competition.Description, htmlAttributes: new { @class = "control-label col-md-2" })
    <div class="col-md-10">
        @Html.EditorFor(model => model.Competition.Description, new { htmlAttributes = new { @class = "form-control" } })
        @Html.ValidationMessageFor(model => model.Competition.Description, "", new { @class = "text-danger" })
    </div>
</div>

<div class="form-group">
    @Html.LabelFor(model => model.AllMembers, htmlAttributes: new { @class = "control-label col-md-2" })
    <div class="col-md-10">
        @Html.ListBoxFor(m => m.SelectedMembers, Model.AllMembers, new { @class = "form-control" })
        @Html.ValidationMessageFor(model => model.AllMembers, "", new { @class = "text-danger" })
    </div>
</div>

<div class="form-group">
    <div class="col-md-offset-2 col-md-10">
        <input type="submit" value="Save" class="btn btn-default" />
    </div>
</div>
</div>

```

11. Buka file Views/Competition/Details.cshhtml dan tambahkan baris code dibawah

```

<dd>
    <ul>
        @foreach (var itemMember in Model.Members)
        {
            <li>@itemMember.FirstName @itemMember.LastName</li>
        }
    </ul>
</dd>

```

```

<dt>
    @Html.DisplayNameFor(model => model.Description)
</dt>

<dd>
    @Html.DisplayFor(model => model.Description)
</dd>

<dt>
    @Html.DisplayNameFor(model => model.Members)
</dt>

<dd>
    <ul>
        @foreach (var itemMember in Model.Members)
        {
            <li>@itemMember.FirstName @itemMember.LastName</li>
        }
    </ul>
</dd>

</dl>
</div>

```

12. Setelah itu run program dan buka pada browser. Arahkan ke halaman edit competition seperti berikut :

localhost:53991/Competitions/Edit/1

Application name Home About Contact Register Log in

## Edit

Competition

Competition Name	<input type="text" value="Adu Panco"/>
Location	<input type="text" value="Ciwaruga"/>
Start Date	<input type="text" value="05/14/2018"/>
End Date	<input type="text" value="05/15/2018"/>
Description	<input type="text" value="Adu Panco satu lawan satu"/>
Members	<div><div>Renaldy</div><div>Ferdhika</div><div>Ujang</div><div>Ridwan</div></div>
<input type="button" value="Save"/>	

[Back to List](#)
